

Kernel

Amplitude

25ms

The figure displays a graph of a kernel function. The vertical axis is labeled 'Amplitude' and the horizontal axis represents time. A red curve starts at the origin (0,0), rises to a peak, and then decays asymptotically towards the horizontal axis. A horizontal scale bar is positioned below the curve, starting from the origin and extending to the right, with the label '25ms' centered above it. The entire graph is enclosed in a black rectangular frame.
